EDUCATION

4th year Software Engineering

Debre Markos University

📅 2022 - Present

SKILLS

Technical skills in HTML, CSS, JavaScript, React, Java, C++, C#

Data Structures and Algorithms (DSA)

Version Control (Git)

Basic Web Development

Database Knowledge

Team Leadership

Project Management

Mobile Application Development

Supervised Machine Learning

Problem-Solving Ability

SUMMARY

I am an ambitious 4th-year Software Engineering student with a strong passion for front-end and mobile application development. I enjoy bringing ideas to life using technologies such as HTML, CSS, JavaScript, and React. I thrive on solving problems and tackling coding challenges, often finding creative solutions to meet project deadlines. I am eager to secure an internship where I can apply my skills, learn from experienced professionals, and contribute to innovative software solutions that make a meaningful impact.

KEY ACHIEVEMENTS

Led a 5-person team in the development of a mobile application, website, and embedded system, overseeing the entire lifecycle from design to deployment.

Developed a **Food Delivery Web Application** using HTML, CSS, and JavaScript, incorporating a secure login system where customers can access their accounts using a username and password. The main page displays an interactive menu, allowing customers to browse food items, select their desired meals, and add them to their cart. After making their selections, customers are directed to a payment page, where they can complete their transaction. Once payment is processed, customers can finalize their order with a single click, completing the ordering process seamlessly.

COURSES

Supervised Machine Learning, Mobile Application, Website Development, Event Driven Programming
